

# Lava Lamps

The third week of Science Club was all about lava lamps. Science Stars made the lava lamps with food dye, vitamin c tablets, oil and water. We made some changes however, so that it could be a fun experiment. We, instead of always using 1 tablet, used different amounts. E.g. half a tablet, a quarter of a tablet, three quarters of a tablet, 2 tablets etc. The children had a lot of fun doing this experiment, and they also made hypothesis. They recorded their results in a graph, and drew pictures of their findings. WELL DONE!
