

## Circuits

In the fourth week of Science Club, we made series circuits. Series circuits are circuits which if one light stops working, so do the others. To make it a bit more enjoyable for the Science Stars, we let them draw pictures that involve lights. E.g. Cats, as you can put bulbs where the eyes are. They stand in as eyes for the cat.

Once we had made the pictures, we moved onto the actual circuit. To make one you get a battery, which you connect from wires, and then connected, onto the bulb. The children really enjoyed this. WELL DONE!
